User Management	Document Management & VectorDB	Intelligent Search Algorithms	Search Execution	System Administration
login to account	add document	evaluate search system	filter documents by metadata	View system health
Manage user settings and profiles	extract named entities in document	View algorithm performance	search for extractive answer	View database status
create account	analyze sentiment of document	Update search algorithm	execute semantic search query	Backup system data
delete account	delete document	try different models	execute exact match query	Deploy new model
reset user password	Add embeddings to documents	Improve models based on feedback	Give feedback for search result	
		Do A/B test for different models
